

Inspector 3 app - which camera is used?

Inspector3 uses 2 cameras:

First the standard camera (look in the settings of the tablet). This can be the Android camera but this can also be a camera that you have installed separately such as Open Camera. If you had installed such a camera then this should be uninstalled.

Secondly, a camera that can be used is the camera that is installed with the Inspector3 app.

If in this Inspector3 app is set that you need to confirm every time that you take a photo, then the default camera is used.

If no confirmation is requested after taking each photo, the camera will be used that is installed with the Inspector3 app.

Administrative photos are always taken with the standard camera of your tablet.
