Claims360 - Extra surcharge

As of this release the extra surcharge from Claims360 will be taken over in PlanManager when importing a Claims360 estimate. This was not possible in the past.

Filter tablets

An extra filter was added that makes it possible to filter on the serial number of the tablet. This is to facilitate the activation of licences. You can find the filter in PlanManager by going to Management-Tablets-Devices.

The screenshot shows a 'Filter' section on the left with a 'Reset' button and a text input field labeled 'Serialnr'. To the right is a 'New' section with a 'Results: Viewing items 1-15 of 402.' header and a pagination control showing '1 2 3 4 5 6 7 8 ... 27'. Below this is a table with the following data:

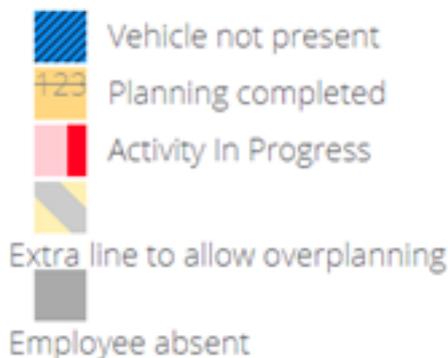

Id	Device name	Serialnr	Alternative serialnr	Model Name	Os Build	Transferable	
7686		1d07860a2e97604c	R52JB0H0B5M	SM-T819	7.0	Transferable	1

Planning on hold

A new configuration in PlanManager has been added that makes it possible to visually see which tasks are 'on hold' in the planning. This ensures that there is a clear view on tasks that might need to be split. You can find this setting at System - General configuration - PLANNING_SHOW_PROGRESS_WHEN_ON_HOLD

An additional colour code was also added to the legend for this setting:

Legend :

-  Vehicle not present
-  Planning completed
-  Activity In Progress
-  Extra line to allow overplanning
-  Employee absent

Adjustment of Planning header

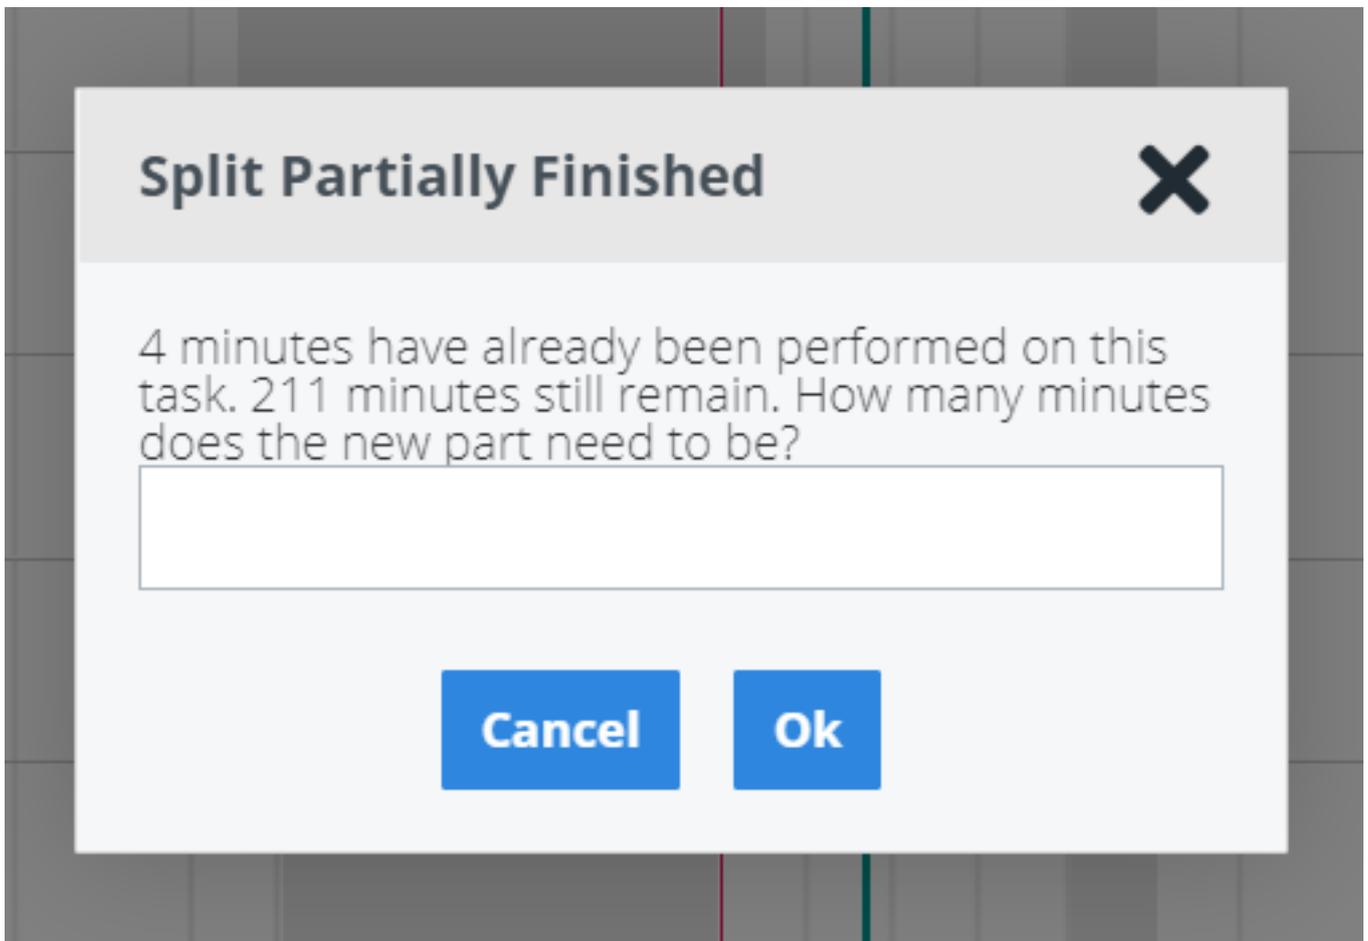

Versions

A change has been made that will cause the top part of the schedule (header) to remain fixed when scrolling. This ensures that you do not have to scroll back up every time to see the header.

Split function planning

An adjustment has been made to the split function in PlanManager. From now on, when splitting a task, the time already worked on it will be taken into account.
