

# Scan app

## Scan app - How do I download it, install it and add it to PlanManager?

### Introduction

You can scan the barcodes of various suppliers coupled with a bar code scanner to the PC, but this is not always convenient. Sometimes there is no computer nearby. A small tablet application was developed that can scan the codes of your suppliers and forward to PlanManager.

### Installation

Download the app by scanning <http://insypro.com/android/scanner.apk>

You'll need to activate the program for the first time.

### Activation

Go Plan Manager to manage - tablet - devices. Click the "New" button at the top left. Then select the app "Scan" and the language with which you want to use the application.

The screenshot shows a web interface for app activation. It features two dropdown menus: the first is labeled 'App \*' and has 'Scan' selected; the second is labeled 'Taal' and has 'Nederlands (België)' selected. Below these menus is a dark blue button with white text that reads 'Genereer activatie code'.

Click "Generate activation code", scan the code with the application. The device is now activated and linked to your PlanManager environment.

### configuration

The scan application can scan everything. To learn how to scan the application-specific code you should contact your supplier.
