

Installation/Configuration

How do I reset the PlanManager configuration? Introduction

Note: before you reset PlanManager, make sure you have the latest version of the program. Refer to [How do I install plan manager?](#) For more information.

Reset via registry

You can reset the PlanManager configuration by importing the following registry file:

<http://insypro.com/resetpm.reg>

Manual

You can also manually remove the HKEY_CURRENT_USER \ Software \ HSS registry.

After a re-start, the auto-configuration starts again. For more information about this configuration, refer to [How to install plan manager?](#)
