

Installation/Configuration

How do I install the link between the paint mixing scale & PlanManager?

Introduction

PlanManager

Navigate to the "System" tab and make sure that SCALE_PROGRAM configuration settings are on the right paint mixing scale.

Possible settings:

- Glassurit
- Sikkens (eg mixitpro) (Akzo Nobel)
- Dupont (Standox)
- Lacour (Profit Manager)
- PPG

Make sure the PAINT_SUPPLIER configuration parameters are set for the right provider (id). We suggest here to create a single supplier in the Maintenance tab. (you will find the id in the navigation bar on a web browser)

As a final step, you must ensure that a user named "PlanManager external" is created in PlanManager, and that this user has a password. Remember this password, you'll need it later.

The paint program

Every paint program has its own way of working. In PlanManager you must ensure that the paint program saves each weighing in a remote file in a folder.

For example, you can set the program for Dupont each weighing is saved in the folder c: / ...

PlanManager Watcher

Install PlanManager via <https://insypro.com/setup.msi> In the c: \ Program Files \ Insypro \ PlanManager you will find the Watcher.exe program

Watcher.exe is a program that examines the changes in a folder. When a change is

Installation/Configuration

detected, the newest file is loaded into a configured location.

PlanManager Watcher configuration:

View map: the folder where the files of the paint mixing scale are located.

url: <https://yourcompany.planmanager.insypro.com>

Action: `c=file&a=scale&noqc=Import`

Login: PlanManager external

Password: the password you created for the PlanManager external user.

Proxy: fill in the proxy's IP address, if it was used. In the second field, you can fill in the port.

"Delete Files After Processing " should NOT be checked.

"File to watch" should be left BLANK.

The screenshot shows the 'PlanManager Map Monitor' configuration window. It has a blue title bar and standard Windows window controls. The main area is light blue and contains several input fields and checkboxes. The fields are labeled: 'Bekijk map' (containing 'C:/exportmixitpro'), 'Url' (containing 'http://caribelhasselt.planmanager.insypro.com'), 'Actie' (containing 'c=file&a=scale&noqc=import'), 'Login' (containing 'planmanager external'), 'Wachtwoord' (masked with dots), 'Proxy' (empty), and 'File to watch' (containing 'PAINTUSG.TXT'). There is a 'Kies Map' button next to the 'Bekijk map' field. Below the 'Proxy' field, there is a checkbox for 'Bestanden verwijderen na verwerking' which is checked, and another checkbox for 'Http Cache proxy' which is unchecked. A note next to the 'File to watch' field states: 'If this is filled in, the system will not watch the folder but will periodically upload a single file (15minutes)'. At the bottom right, there are two buttons: 'Force Run Now' and 'Opslaan'.

Axalta Groep (Cromax, Standox, Spies Hecker)

To connect PlanManager with the new axalta Groep scales (Cromax, Standox, Spies Hecker) execute the attached file and then contact Milsteda Systems Ltd for the activation code.

Milsteda Systems Ltd:

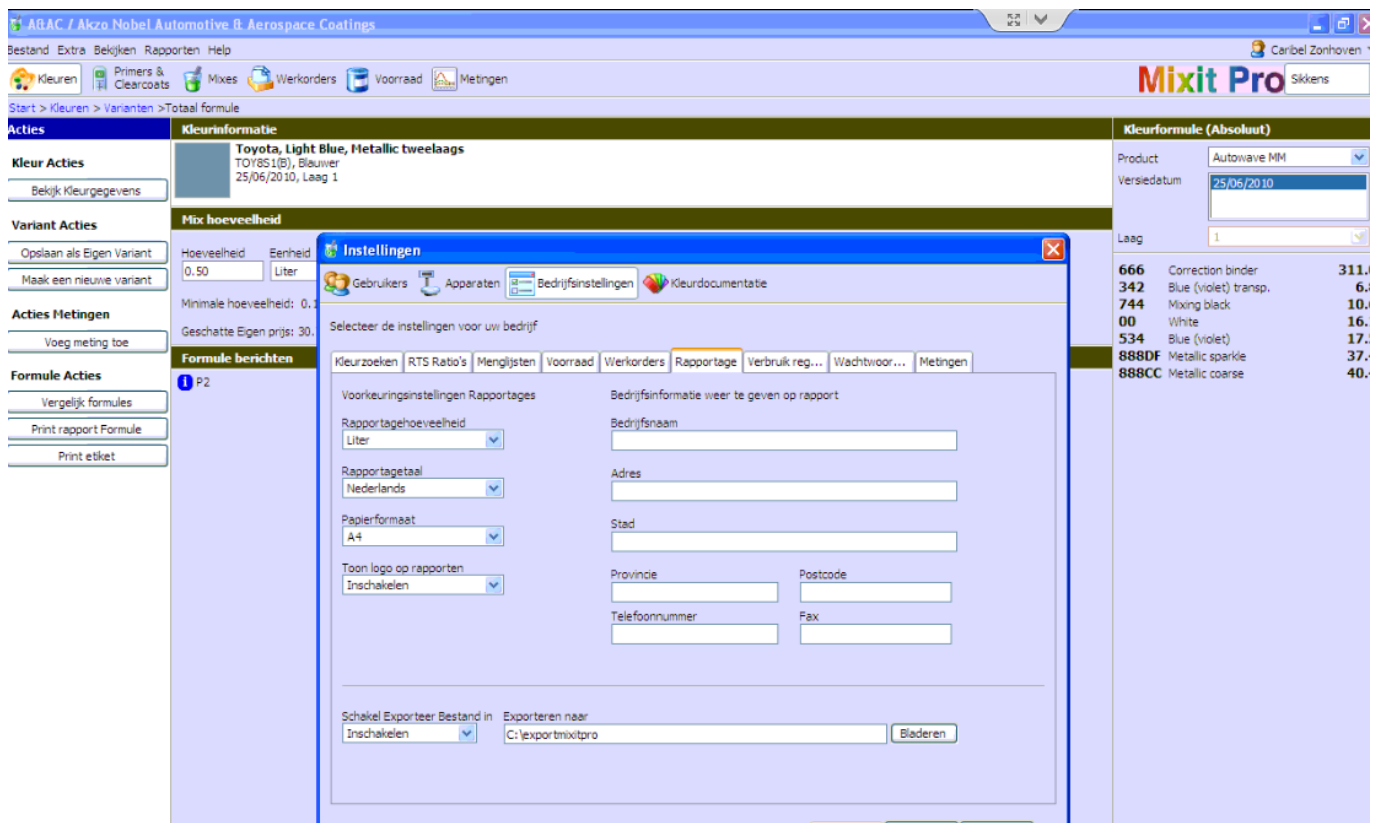

Tel: 01636 613193

Installation/Configuration

Sikkens

If you work with the "sikkens (mixitpro)" program, then you must check the "Delete files after processing". You must also complete the "file to watch" box with PAINTUSG.TXT

For Sikkens, you can also export through "extra configurations". Tab "Reports" gives you the opportunity to specify the folder.

PPG

PPG paint presents your data in an XML file. This XML file needs to be taken by "watcher". Specifically, set the following parameters:

In Watcher:

1. The file is called PPGMixData.xml and is registered in C: \ Color \ PPGImport
2. To be certain of having the right path, you can search the ROCO parameters.
3. You must check the "Delete files after processing".

Installation/Configuration

Your settings "watcher" must be comparable to the screen taken below:

The screenshot shows the 'PlanManager Map Monitor' window. It has a blue title bar with the application name and standard window controls. The main area is divided into two columns. The left column contains input fields for 'Bekijk map' (C:\Color\PPGImport), 'Url' (http://uwbedrijf.planmanager.insypro.com), 'Actie' (c=file&a=scale&noqc=import), 'Login' (planmanager external), 'Wachtwoord' (masked with dots), 'Proxy' (empty), and 'File to watch' (PPGMixData.xml). There is a checkbox for 'Bestanden verwijderen na verwerking' which is checked. The right column contains explanatory text for each field, a 'Kies Map' button, a 'Poort' field, a checkbox for 'Http Cache proxy' (unchecked), and a paragraph about the 'File to watch' field. At the bottom right are 'Force Run Now' and 'Opslaan' buttons.

RM / Lacour / Ixell (ColorDirector)

If you work with a balance type RM / Lacour / Ixell, then the folder information will be sent to your paint mixing scale when you click on the appropriate button below.

lacour.ini the file is generated and will be saved on your computer where the paint mixing scale is. The file is saved in the folder that is configured in local settings PlanManager by "thridparty_folder". The scale then picks up this file, and uses the date from the file to create a file. Once the file has been created on the scale, there can be weighed on this file.

Once paint data is available for a file, RM / Lacour / Ixell will write this data in a folder to be determined. It's this folder we should also set in the watcher. The data is also written in an INI file. An individual file is written per weighing. It is therefore possible that there are many files in this folder.

Specifically, you must set the following configurations in Watcher:

1. View map: the path that is configured in ColorDirector
2. You should not check "Delete files after processing"

Strana 4 / 14

Installation/Configuration

3. You do not have to give a file name.

Your Watcher settings should be similar to the screen below:

The screenshot shows the 'PlanManager Map Monitor' window. It has a blue title bar with the PM logo and window controls. The main area is divided into two columns. The left column contains input fields for 'Bekijk map' (set to '<the same as in ColorDirector>'), 'Url' (http://uwbedrijf.planmanager.insypro.com), 'Actie' (c=file&a=scale&noqc=import), 'Login' (planmanager external), 'Wachtwoord' (masked with dots), 'Proxy' (empty), and 'File to watch' (empty). There is also a checkbox for 'Bestanden verwijderen na verwerking'. The right column contains a 'Kies Map' button, a text area for 'De map die wordt aangeduid bij "Opslaan kopie ontvangen bestand"', a 'Poort' field, a checkbox for 'Http Cache proxy', and explanatory text about file uploads. At the bottom right are 'Force Run Now' and 'Opslaan' buttons.

NOTE: If the Lacour mixing scale is set that you have only acces to the weighing program you should contact lacour to make these changes.

In PlanManager:

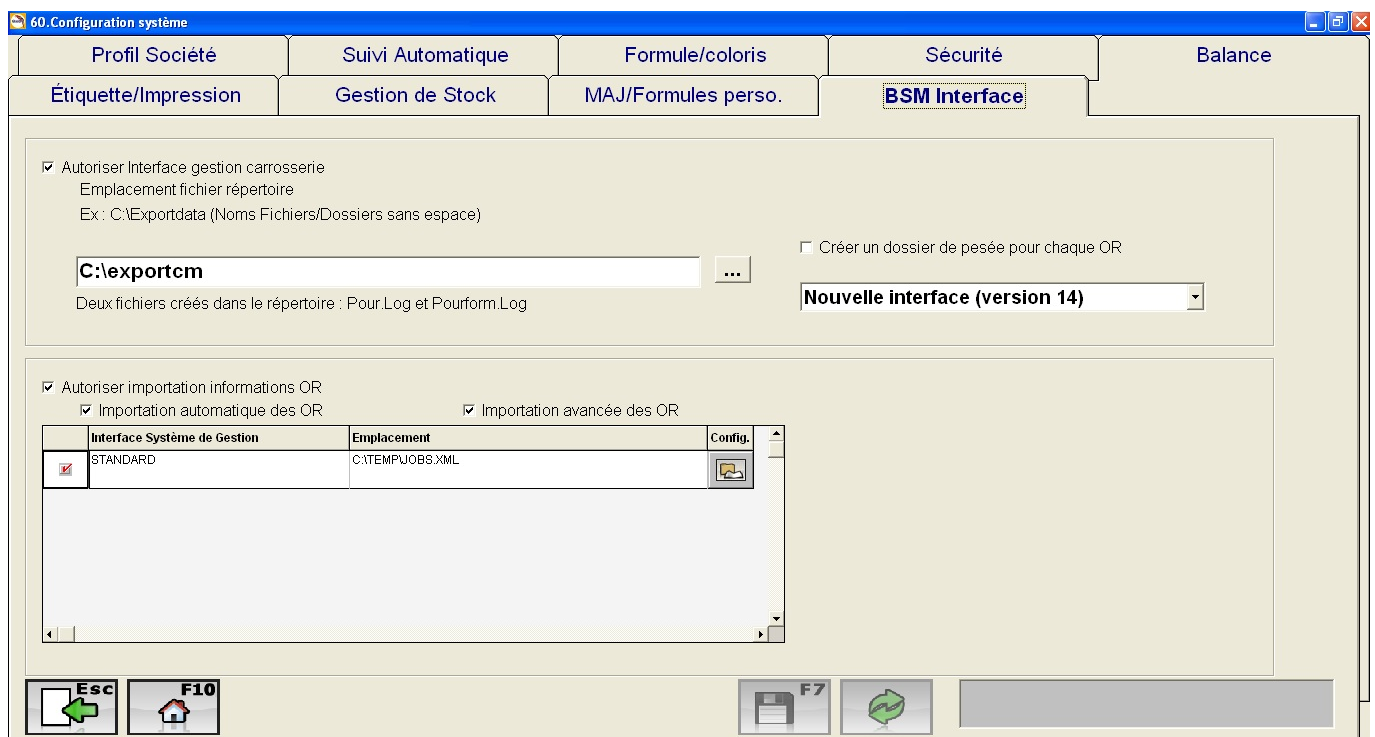

For RM / Lacour / Ixell (ColorDirector) set the configuration on SCALE_PROGRAM Lacour. Remember sure to click "Save."

Remember that paint weighing scale can send the file only after clicking "Ready to start". Be sure that the file has an owner and an insurer, before clicking on it. RM / Lacour / Ixell (ColorDirector) needs this data.

Glasurit

Profit Manager 1. Click on Settings -> Interface BSM

Installation/Configuration

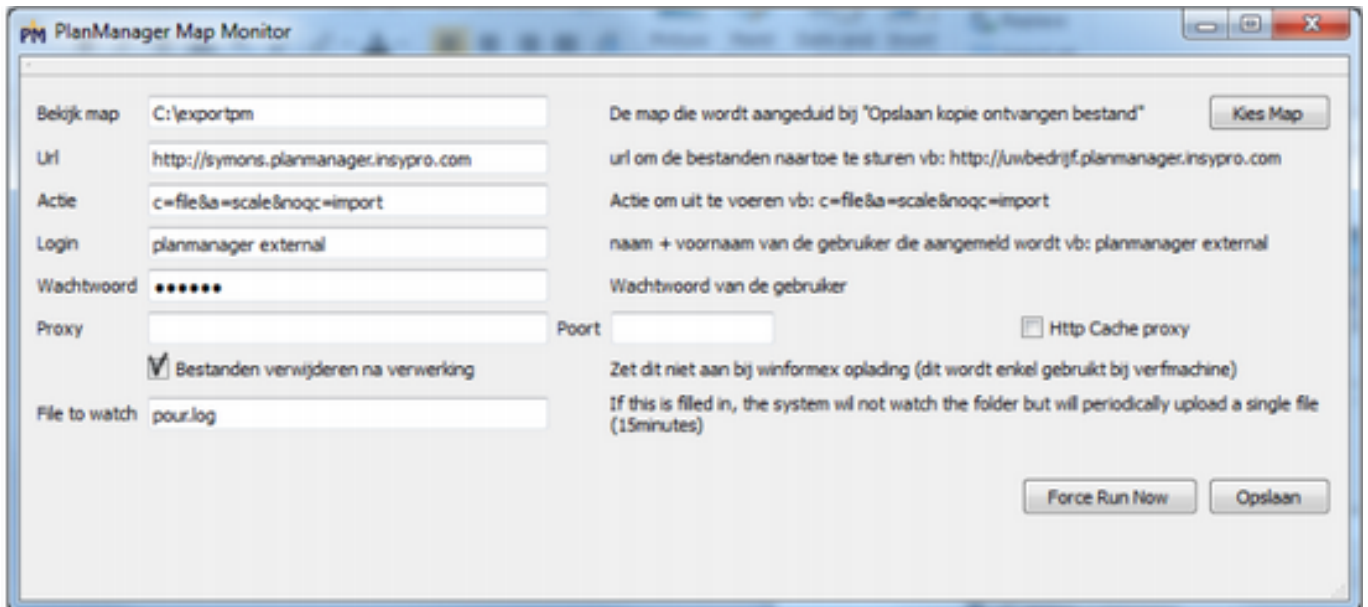

Open (if not already) export file to C: / exportpm and the type of interface in Version 13

2. PlanManager

Installation/Configuration

1. install the PlanManager application
2. Open watcher(Watcher.exe) in c: \ program files (x86) / insypro / PlanManager /
3. In the bottom right corner, right click on icon and choose "Restore"
4. pour.log is the type of file Paint Manager, for others, it's different.
5. Delete files after processing: must be checked

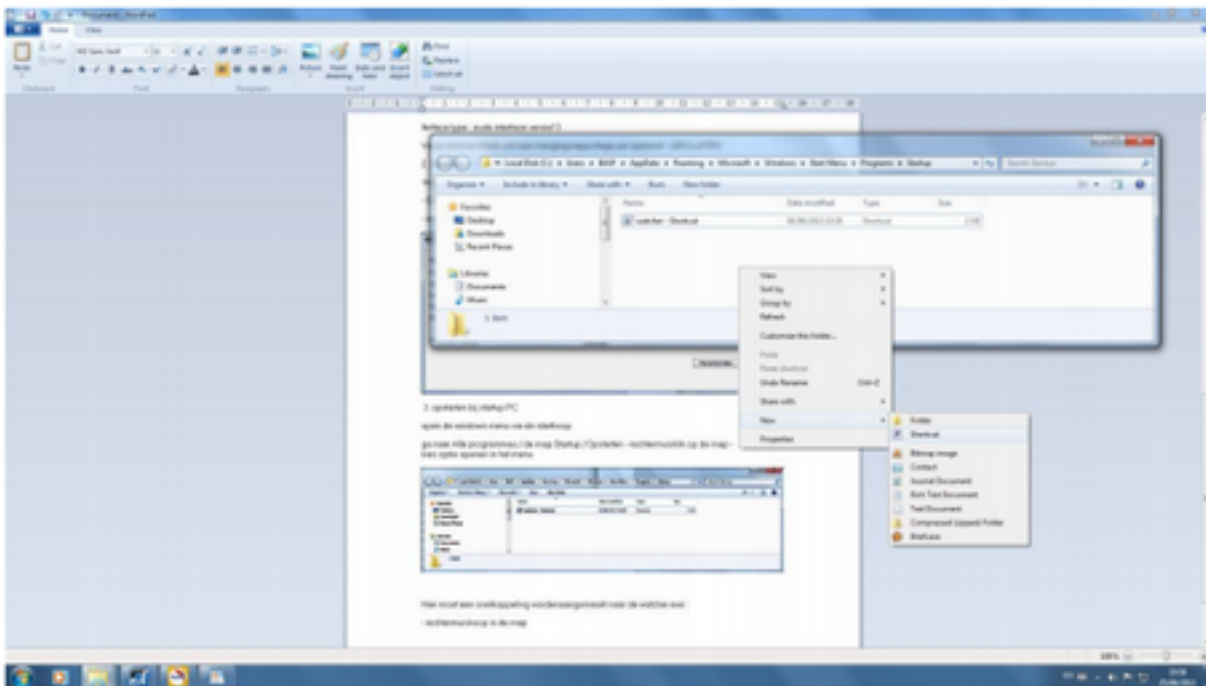

3. Turn on the PC

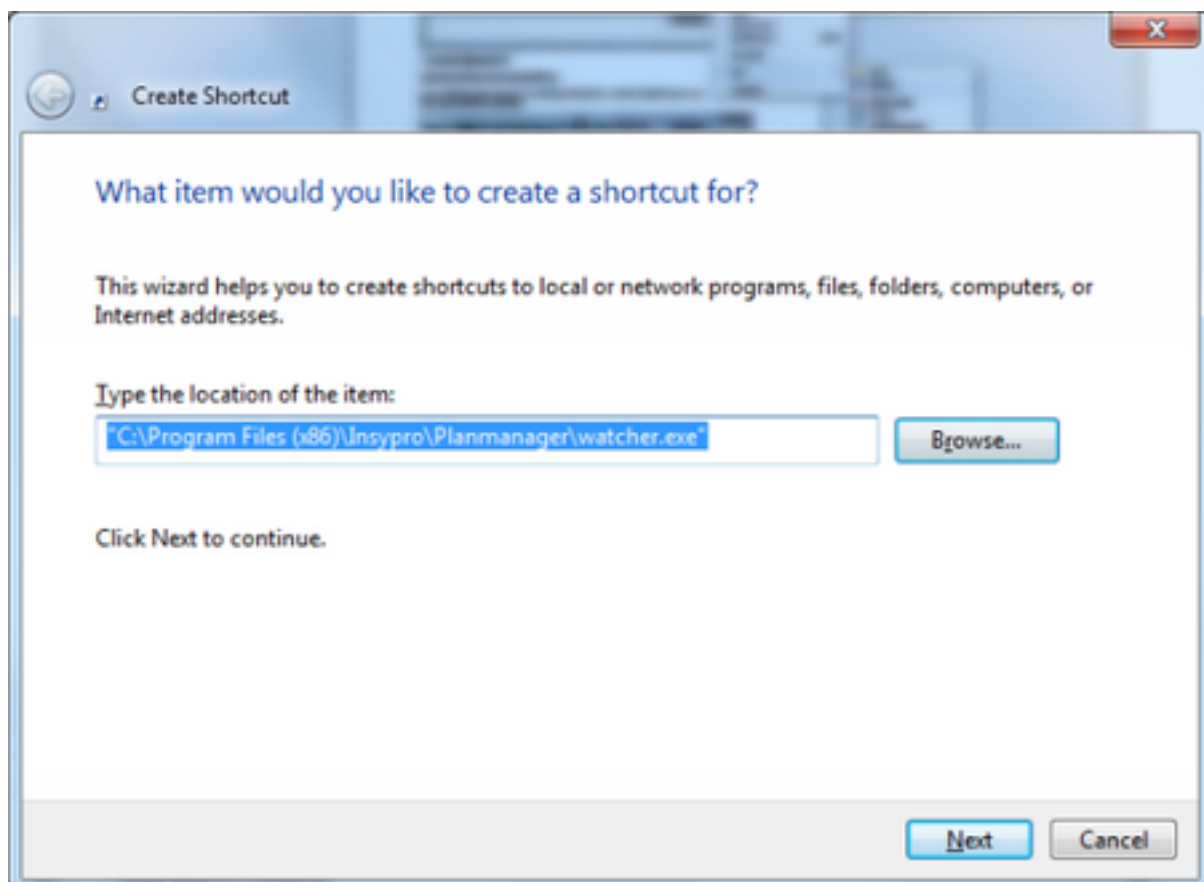

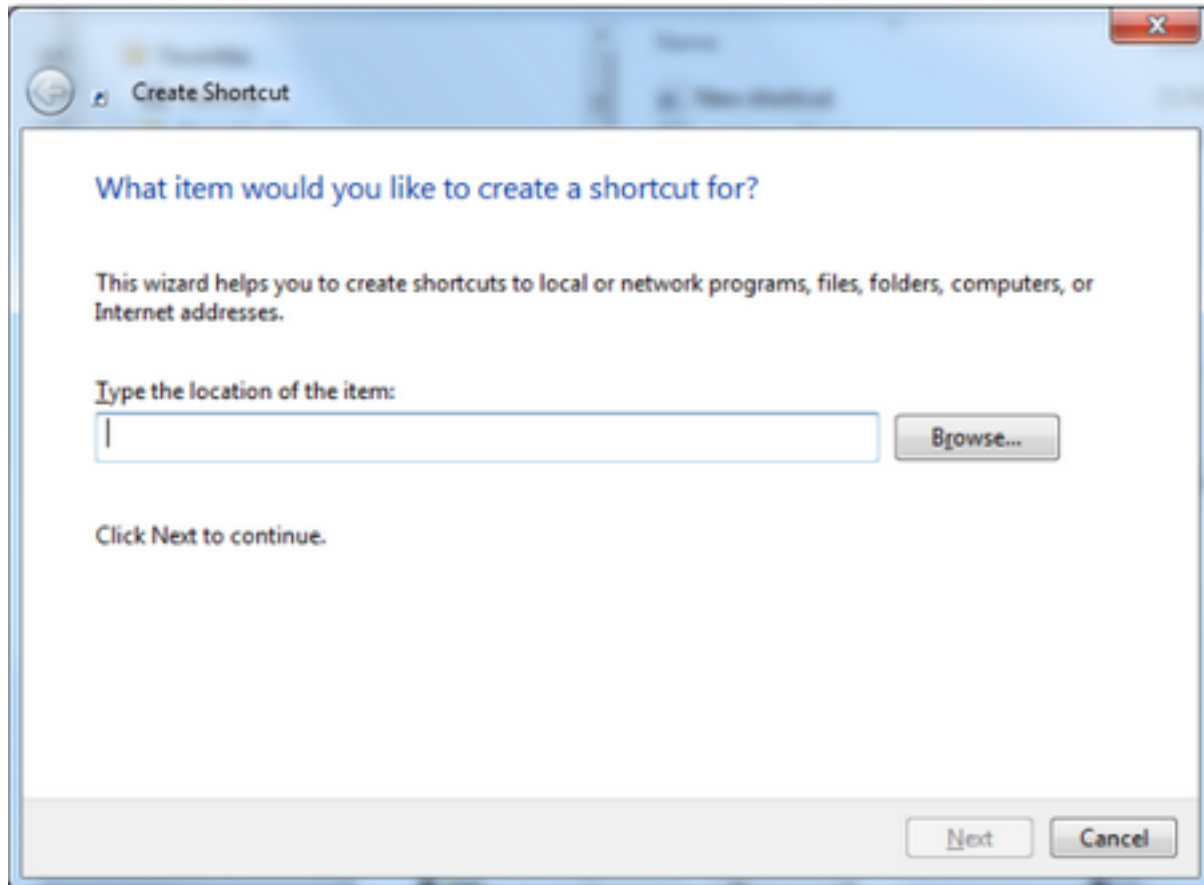

1. Open the window via 'menu the Start button
2. go to "All Programs" / "Start" / folder "Startup". Right click on the folder and choose Open from the menu
3. There must be created a shortcut to go on Watcher.exe:

Installation/Configuration

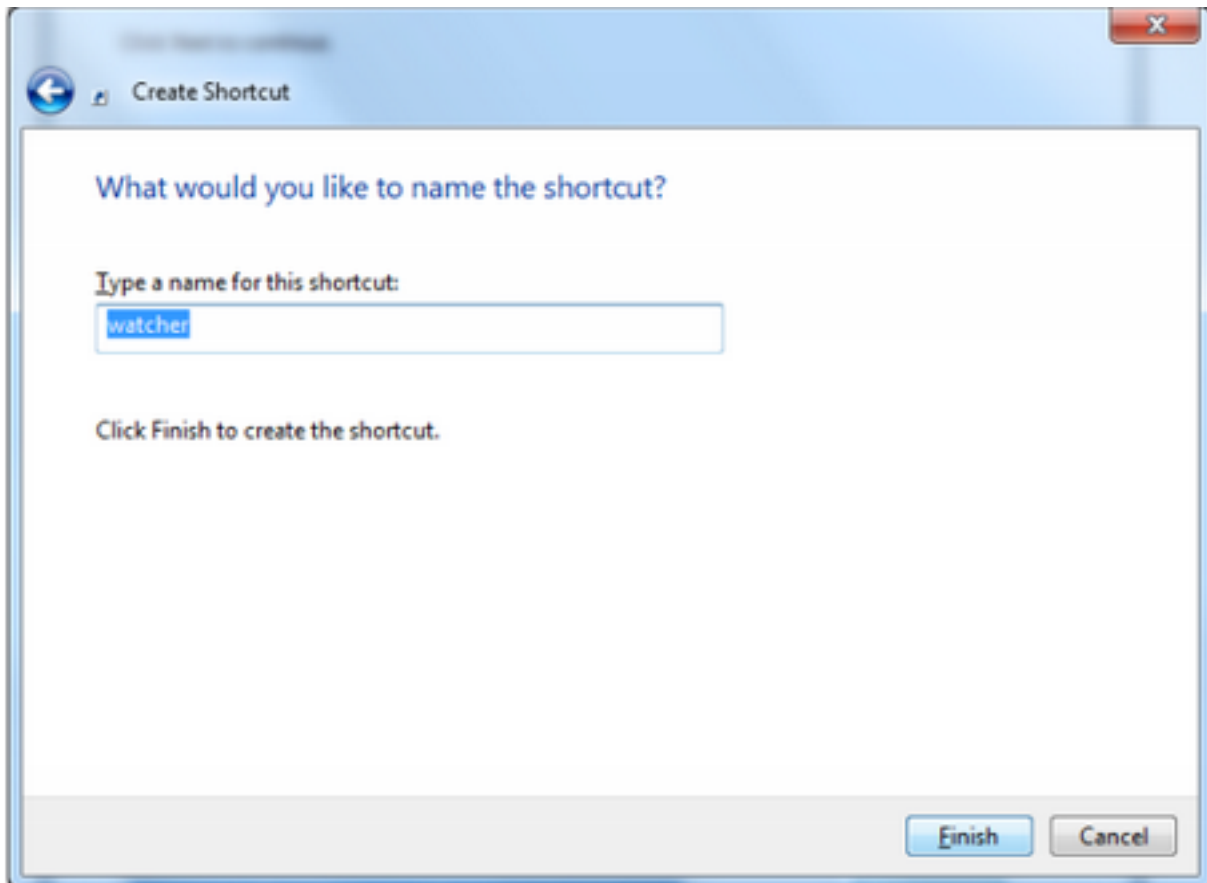

4. Right click in the right part of the screen (in the file)
5. Choose New / shortcut
6. Via the browse button, go to
7. "C: \ Program Files (x86) \ Insypro \ PlanManager \ Watcher.exe"
8. Click next
9. Click done

Installation/Configuration

Installation/Configuration

Boot at startup PC

Open the Windows menu from start.

Go to All Programs / Startup / Startup folder - right click on the folder - choose Open from the menu.

Here a shortcut should be made for the watcher.exe:

Start Watcher from "C: \ Program Files (x86) \ Insypro \ Plan Manager " and copy to

Installation/Configuration

the startup folder.

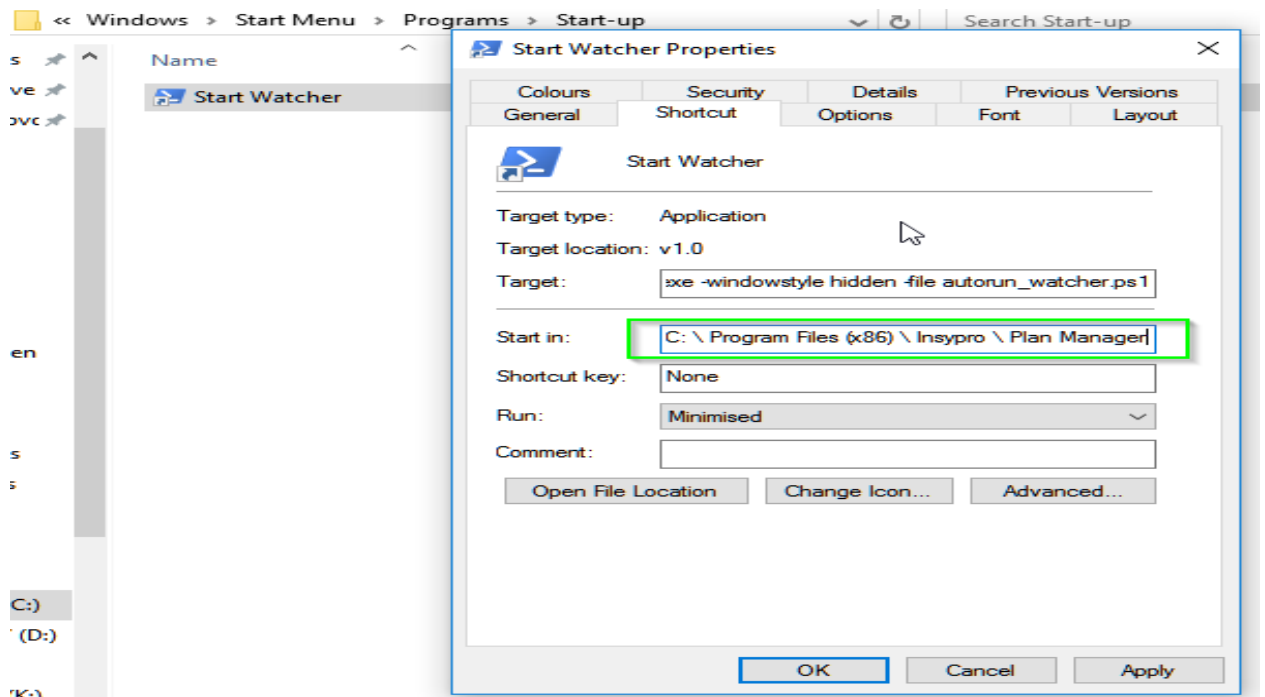

In Startup, right-click Start Watcher, select properties.

In properties, enter the path to "C: \ Program Files (x86) \ Insypro \ Plan Manager" in the "start in".

Then click "ok".

Note! for Windows 8 & 10 'The All Users Startup Folder' is located at the following path:

C:\ProgramData\Microsoft\Windows\Start Menu\Programs\StartUp

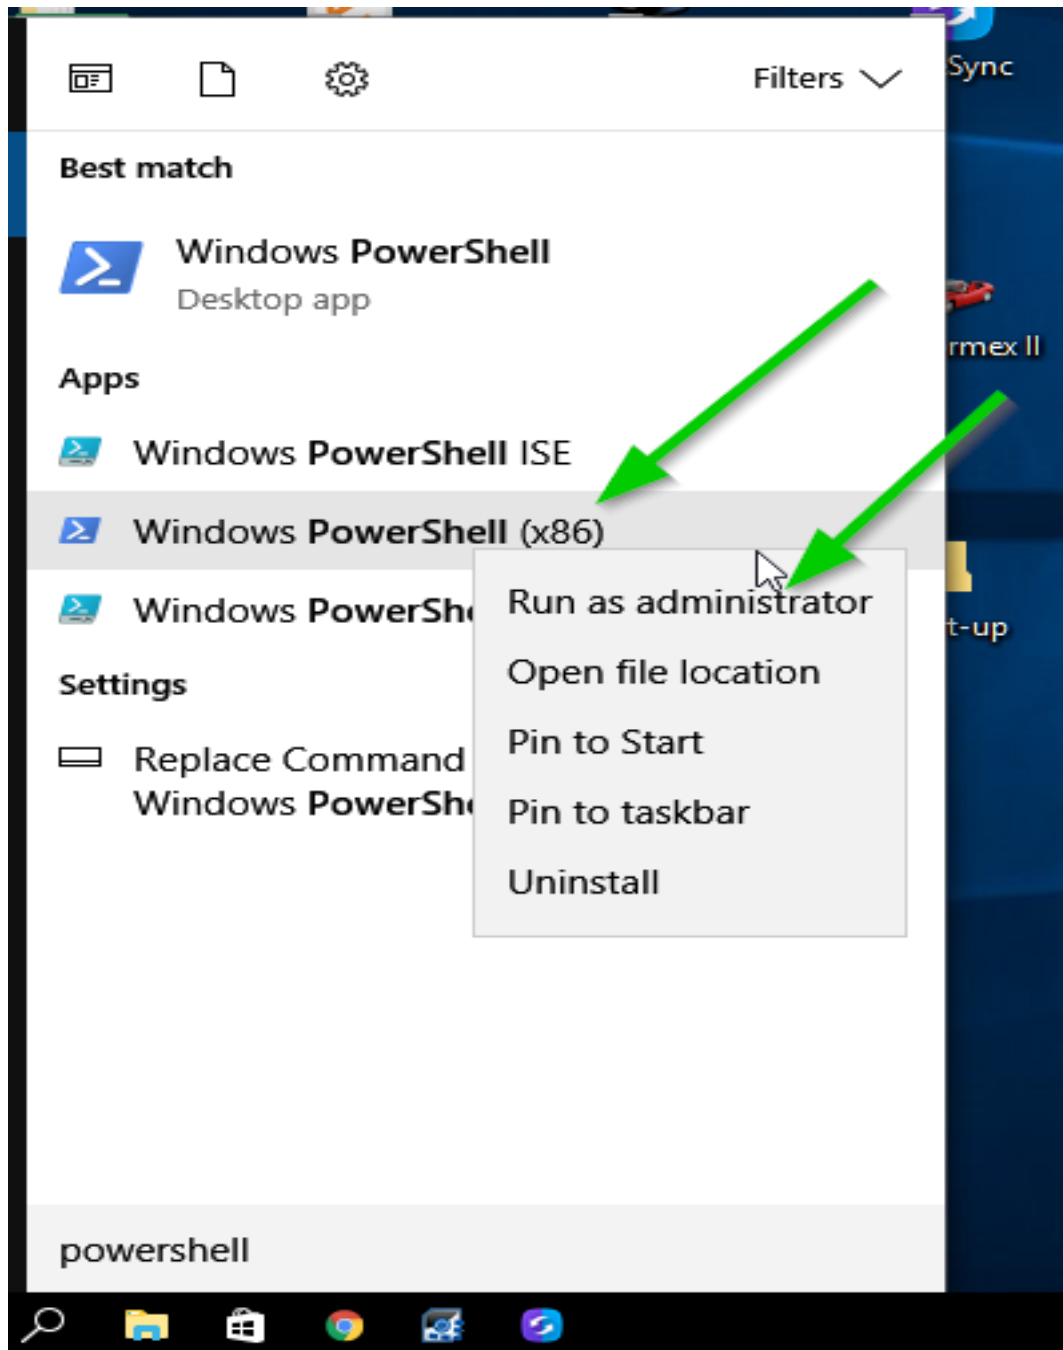

Now we need to run a powershell script:

Setting PowerShell:

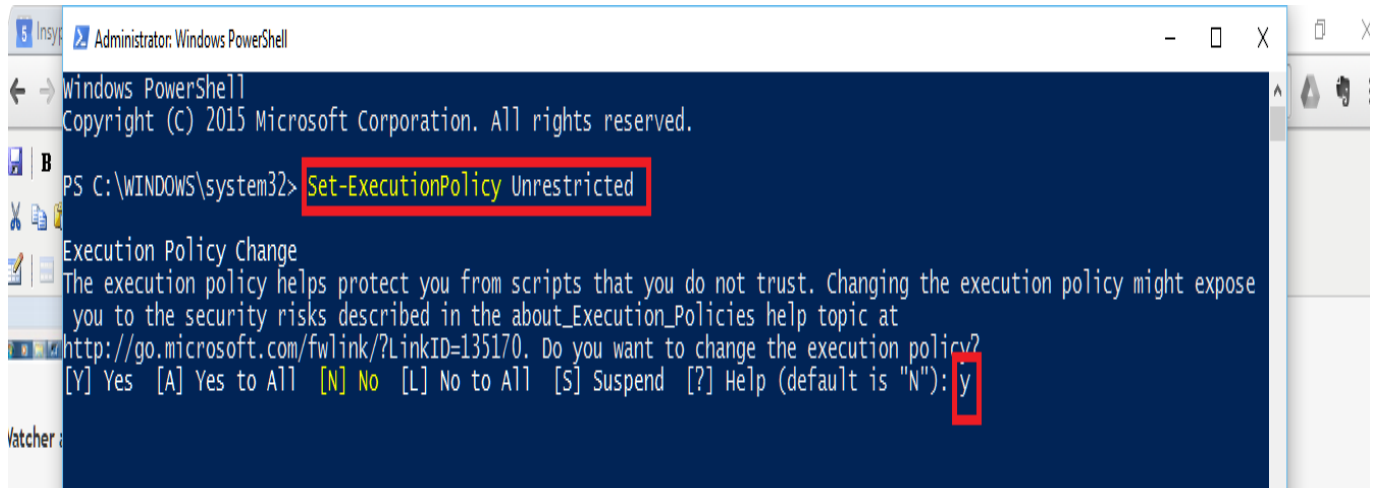

Start button / Search: powershell typing / enter / right click: Run as

Installation/Configuration

administrator, type powershell: Set-ExecutionPolicy Unrestricted enter +
Y + enter

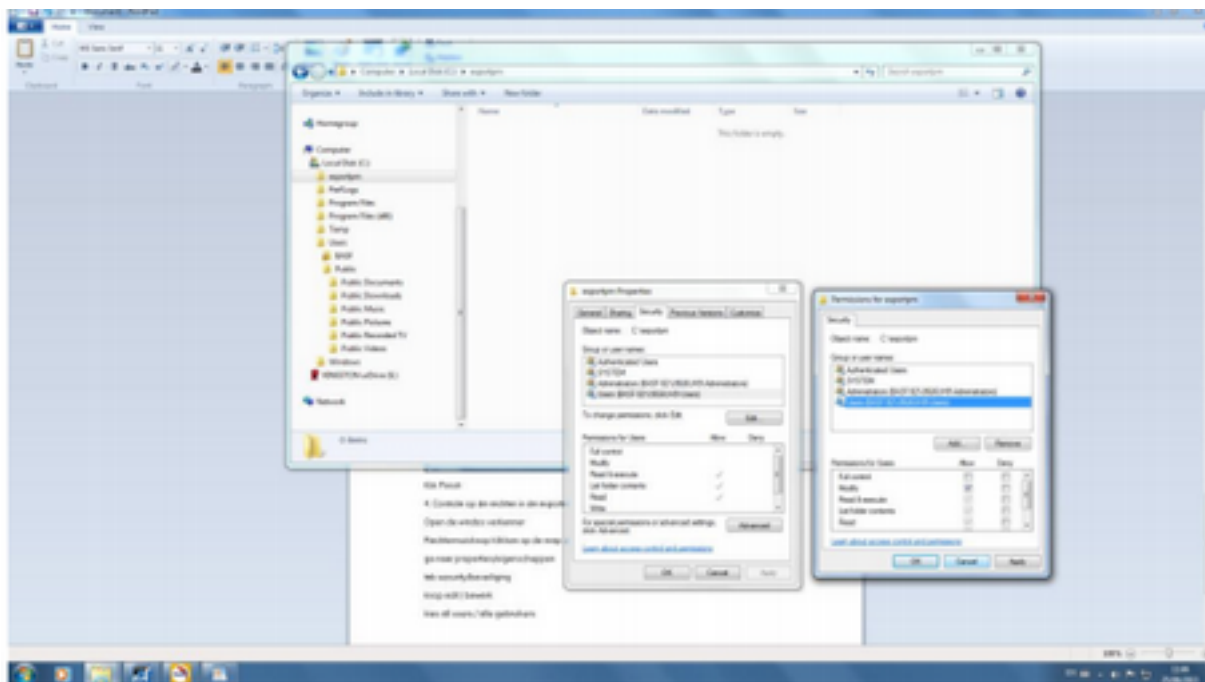

Installation/Configuration

4. Check the rights in the export

1. Open windos explorer
2. Right click on the folder itself
3. Go to properties / properties
4. Tab security / safety
5. Button edit / edit
6. Select all users / all users
7. Select modify the rights

Installation/Configuration
